

What is claimed is:

1. An apparatus for packing a hood on a facemask comprising:

A first connector means secured to at least one portion of a hood and a second connector means secured to at least a second portion of the hood such that the first and second connector means are compatible.

2. An apparatus for packing a hood on a facemask comprising:

A first connector means secured to at least one portion of the facemask and a second connector means secured to at least a second portion of the hood such that the first and second connector means are compatible.

3. An apparatus for packing a hood on a facemask comprising:

A first connector means secured to at least on portion of the facemask and a second connector mean secured to at least a second portion of the facemask such that the first and second connector means are compatible.

4. An apparatus for packing an integrated hood on a facemask comprising:

A first connector means secured to at least one portion of a hood and a second connector means secured to at least a second portion of the hood such that the first and second connector means are compatible.

5. An apparatus for packing an integrated hood on a facemask comprising:

A first connector means secured to at least one portion of the facemask and a second connector means secured to at least a second portion of the hood such that the first and second connector means are compatible.

6. An apparatus for packing an integrated hood on a facemask comprising:

A first connector means secured to at least on portion of the facemask and a second connector mean secured to at least a second portion of the facemask such that the first and second connector means are compatible.
